**HME's New DX200 Wireless Intercom System  
Brings Clear, Secure Digital Sound to New Venues**

San Diego, CA — Intercom users and tech-savvy folks can now enjoy the digital clarity and security that comes with HME's new DX200 Digital Wireless Intercom System. This system can be used at a multitude of venues, including sports events, churches, schools, performing arts/entertainment facilities, and government.

Operating in the 2.4 GHz range, the DX200 offers exceptionally clear, hands-free communications. Users don't have to contend with possible interference from neighboring systems operating in the crowded UHF or VHF frequency bands. The DX200 is designed using the latest digital techniques such as frequency hopping spread spectrum with encrypted signals for secure, interference-free communications. This technique prevents people outside the system from hearing or interfering with your conversations. Diversity antennas and dual-slot diversity ensure that the strongest audio signal is transmitted and received, further improving the clarity of conversations. The beltpacs are the smallest on the market and use long-lasting rechargeable batteries.

"The digital DX200 is one of the best sounding systems on the market; it's designed for a simpler, more mobile operation in diverse applications," says J. Michael Hughes, General Manager of the Professional Audio Division at HME. "You really get a lot out of this system, both in performance and price. Its license-free operation is another price break for users searching for a more affordable intercommunications solution."

The DX200's wireless ISO channel is another useful feature, allowing beltpac users to converse with other crew members on the same channel. And the ISO+ enables users to talk to those operating on a secondary base station. Fully loaded with the essential features and enhancements for clear intercommunications, the DX200 is a cost-effective and high-performing wireless intercom solution for users at all levels. The DX200 is compatible with RTS™ and ClearCom™ hardwired intercom systems.

The DX200 is the second wireless intercom in HME's new pro-audio product line. The PRO850 Synthesized UHF Professional Wireless Intercom (<[www.hmepro850.com](http://www.hmepro850.com)>) was released at the end of 2003 and has already received awards for product of the year in the professional theatre and broadcast markets.

**About HME**

HME is a leading provider of customer-focused solutions to enhance the performance and productivity of businesses in a variety of markets. Incorporated in 1971, HME was a pioneer in the development of the first intercom system for the pro-audio industry. From communications to entertainment, security to pedestrian tracking, HME's wireless and digital innovations are transforming many industries, including pro-audio, quick service restaurants, casinos and retail. HME develops and delivers a comprehensive line of customer-driven solutions to over 80 countries worldwide.
