

System 30A Timer and PC30A Now Ethernet Capable

HME's EI30 and PC30A Connect Networks, Conveniently Gather Transaction Data

POWAY, Calif. – Aug. 17, 2005 – Multi-chain restaurant operators can monitor and track speed-of-service data from multiple stores simultaneously through the System 30A Timer EI30 Ethernet interface and PC30A software by HM Electronics, Inc. (HME).

The EI30 Ethernet Interface for the System 30A Timer allows users to establish an Ethernet connection and frees up a hard-to-come-by serial port in the back office. The EI30 Ethernet Interface is installed directly into the System 30A timer system and is easily configurable with the local network connection.

Additionally, the EI30 is retrofitable with existing System 30A Timers.

HME's PC30A Software collects timer data and generates reports to monitor the performance of drive-thrus, and can connect to the network. Users can remotely set the date and time on timer and will correspond with other restaurant equipment, including POS systems. The PC30A Software can also be programmed to automatically save and print reports according to a defined schedule.

"This software enables multi-chain operators to monitor the speed of service of all its stores from one central office location," said Daren Haas, director of marketing, HME. "The ability to poll data from multiple stores is invaluable. Once restaurants have this information, they can compare operations to find out what is working and what is not."

For more information about the EI30 or PC30A, contact HME at (800) 848-4468.
